

Enhancing safety, energy savings and the beauty of your buildings with GlassLock window films.

For as beautiful as windows are, they also come with their share of problems: higher energy costs, discomfort, safety & security issues and fading, just to name a few. GlassLock is the one name you can trust to lessen and even eliminate the problems windows can cause for your business.

We've all experienced it. When the morning or afternoon sunlight creeps into a room, the thermostat shoots up, and the air conditioning starts working overtime to cool the room. As if this wasn't bad enough, the other side of the building ends up freezing. There is a solution; GlassLock Window Films reject up to 79% of the sun's

GlassLock Window Films reject up to 79% of the sun's heat. This means your HVAC System can work more efficiently, reducing your energy costs.

- **Reduce air conditioning costs**
- **Reduce glare and eye discomfort**
- **Increase personal safety from flying glass**
- **Allows you to insulate your windows and keep your view**

Causes of fading

Energy — GlassLock solar window films gives your windows added insulation value to help increase comfort and reduce energy consumption. In warm weather, GlassLock Sun control Plus All Season Window Films block out up to 79% of the sun's heat at the window surface to help reduce air conditioning costs.

Improved HVAC Efficiency— The use of more environmentally safe refrigerants for commercial chillers will cause a cooling dilemma. Chiller conversions

Rejects up to 79% of the heat!

will experience a loss in cooling capacity, and an efficiency drop that could reach 15%. Because the GlassLock window film cuts heat gain from 19% to 76%, the chillers capacity loss can be offset. An application of GlassLock window film may allow the building owner to maintain the level of cooling comfort for tenants without adding expensive cooling capacity or increasing annual energy costs from additional chiller run time.

Improved Aesthetics— Viewed from the outside, GlassLock window film disguises the clutter and disarray of half-drawn drapes and blinds, non-uniform furniture placement and uneven lighting. And provides an economical way to make your building more attractive and more valuable. A complete selection of films that vary in color, density and heat rejection qualities, offers you building the ideal balance of aesthetic and performance characteristics.

UV Protection— The sun's ultraviolet rays are a major contributor to fading. Carpeting, paneling, desks, drapes and upholstered furniture represent a sizable investment that can quickly lose value when damaged by prolonged exposure to the sun. GlassLock window film filters out up 99% of the harmful UV rays, fading is considerably reduced and furnishings are better protected.

Safety— GlassLock's adhesive technology to bond tightly to the glass. This helps hold shattered glass in place and helps reduce the dangers associated with breakage. In the event of severe weather, earthquakes, explosions, fires or vandalism, this can significantly reduce injuries due to flying glass.
